

Inspecting Element Attributes

When the snapshot doesn't show an element's `id`, `class`, `data-*` attributes, or other DOM properties, use `eval` to inspect them.

Examples

```
playwright-cli snapshot
```

```
# snapshot shows a button as e7 but doesn't reveal its id or data attributes
```

```
# get the element's id
```

```
playwright-cli eval "el => el.id" e7
```

```
# get all CSS classes
```

```
playwright-cli eval "el => el.className" e7
```

```
# get a specific attribute
```

```
playwright-cli eval "el => el.getAttribute('data-testid')" e7
```

```
playwright-cli eval "el => el.getAttribute('aria-label')" e7
```

```
# get a computed style property
```

```
playwright-cli eval "el => getComputedStyle(el).display" e7
```
