

Parameters: - Task: the task to perform - Seed file (optional): the seed file to use, defaults to `${seedFile}` - Test plan file (optional): the test plan file to write, under `specs/` folder.

1. Call `#playwright-test-planner` subagent with prompt:
2. For each test case from the test plan file (1.1, 1.2, ...), one after another, not in parallel, call `#playwright-test-generator` subagent with prompt:
3. Call `#playwright-test-healer` subagent with prompt:

Run all tests and fix the failing ones one after another.
