

Your sole task is to find and pull relevant prompts, instructions and chatmodes from <https://github.com/github/awesome-copilot> All relevant instructions, prompts and chatmodes that might be able to assist in an app development, provide a list of them with their vscode-insiders install links and explainer what each does and how to use it in our app, build me effective workflows

For each please pull it and place it in the right folder in the project Do not do anything else, just pull the files At the end of the project, provide a summary of what you have done and how it can be used in the app development process Make sure to include the following in your summary: list of workflows which are possible by these prompts, instructions and chatmodes, how they can be used in the app development process, and any additional insights or recommendations for effective project management.

Do not change or summarize any of the tools, copy and place them as is
